

HM606

Double flag extruded listing device

HM606

Double flag extruded listing device

With this retro fit kit it is possible to rebuild a standard Dürkopp Adler 868 or even the older 768 post bed machine for attaching a double flag PWP extruded listing underneath upholstery pieces.

This special sewing set allows you to easily load the PWP into the guiding system which will then fold the 2 sides in the correct position. The guiding system can be adjusted to work with flag lengths between 28 and 42mm based on a machine with a needle distance of 8mm.

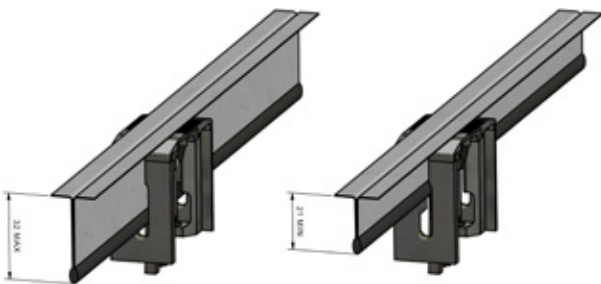

The PWP guiding system comes with a quick release mounting plate which makes it possible to take it off the post easily without changing the preset adjustment.

The HM606-868 kit includes:

- Feaddog
- Needle plate
- Center post
- PWP guiding with quick release

The HM606-768 includes:

- Feed dog
- Needle plate
- Center post
- Feaddog lever
- PWP guiding with quick release
